# Implementation of Procure-to-Pay (P2P) Cycle in SAP MM

Student Details

Name: Ankit Das

Roll Number: 23051408

Batch/Program: SAP Data Analytics

## 1. Organization Overview

This project is based on a fictitious company named “ABC Manufacturing Pvt. Ltd.”, which deals in production and distribution of electronic components. The company requires an efficient procurement system to manage vendor transactions, inventory, and financial processes.

## 2. Introduction

The Procure-to-Pay (P2P) cycle is a critical business process that manages the complete lifecycle of procurement, from identifying requirements to making payments to vendors. It ensures operational efficiency, cost control, and transparency.

This project presents a simulation-based implementation of the P2P cycle using SAP Materials Management (MM).

## 3. Problem Statement

Many organizations face challenges in managing procurement manually, including lack of transparency, delayed approvals, inaccurate data entry, and inefficient vendor handling.

## 4. Proposed Solution

The SAP MM module provides a structured and automated solution to manage procurement activities.

Business Benefits:

- Improved procurement planning
- Real-time tracking
- Better vendor management
- Reduced operational costs
- Enhanced accuracy

## 5. Process Flow of P2P Cycle

The Procure-to-Pay process in ABC Manufacturing Pvt. Ltd. follows a structured workflow to ensure efficient procurement and financial control.

5.1 Vendor Creation
Vendors are registered in the system with necessary details such as name, address, and payment terms.

5.2 Purchase Requisition (PR)
Departments generate purchase requisitions based on material requirements.

5.3 Purchase Order (PO)
A purchase order is created and sent to the vendor, specifying quantity, price, and delivery schedule.

5.4 Goods Receipt (GR)
Goods received are verified and recorded in the system, updating inventory.

5.5 Invoice Verification
Invoices are matched with purchase orders and goods receipt data to ensure accuracy.

5.6 Payment Processing
After verification, payment is processed to the vendor, completing the cycle.

## 6. Process Flow Diagram

Vendor → PR → PO → GR → Invoice → Payment

## 7. Detailed Process Explanation

The P2P process ensures that procurement activities are aligned with organizational needs. Each step plays a critical role in maintaining accuracy and efficiency.

The integration between SAP MM and SAP FI ensures seamless financial transactions and proper accounting of procurement activities.

This structured approach reduces manual errors and enhances transparency across departments.

## 8. Sap Module Mapping

| Step | SAP Module | Description |
|---|---|---|
| **Vendor Creation** | MM | Vendor master data setup |
| **Purchase Requisition** | MM | Internal request generation |
| **Purchase Order** | MM | Vendor order creation |
| **Goods Receipt** | MM | Inventory update |
| **Invoice Verification** | FI | Financial validation |
| **Payment Processing** | FI | Vendor payment |

## 9. Screenshots / Simulation

Figure 1: Procure-to-Pay Process Flow

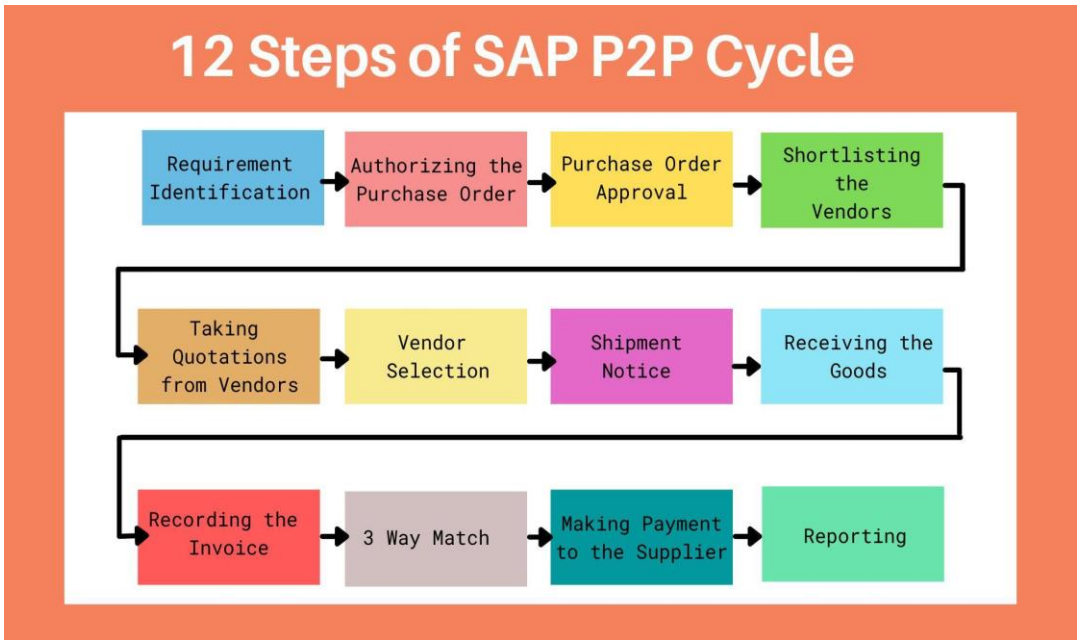

Figure 2: SAP P2P Workflow Diagram

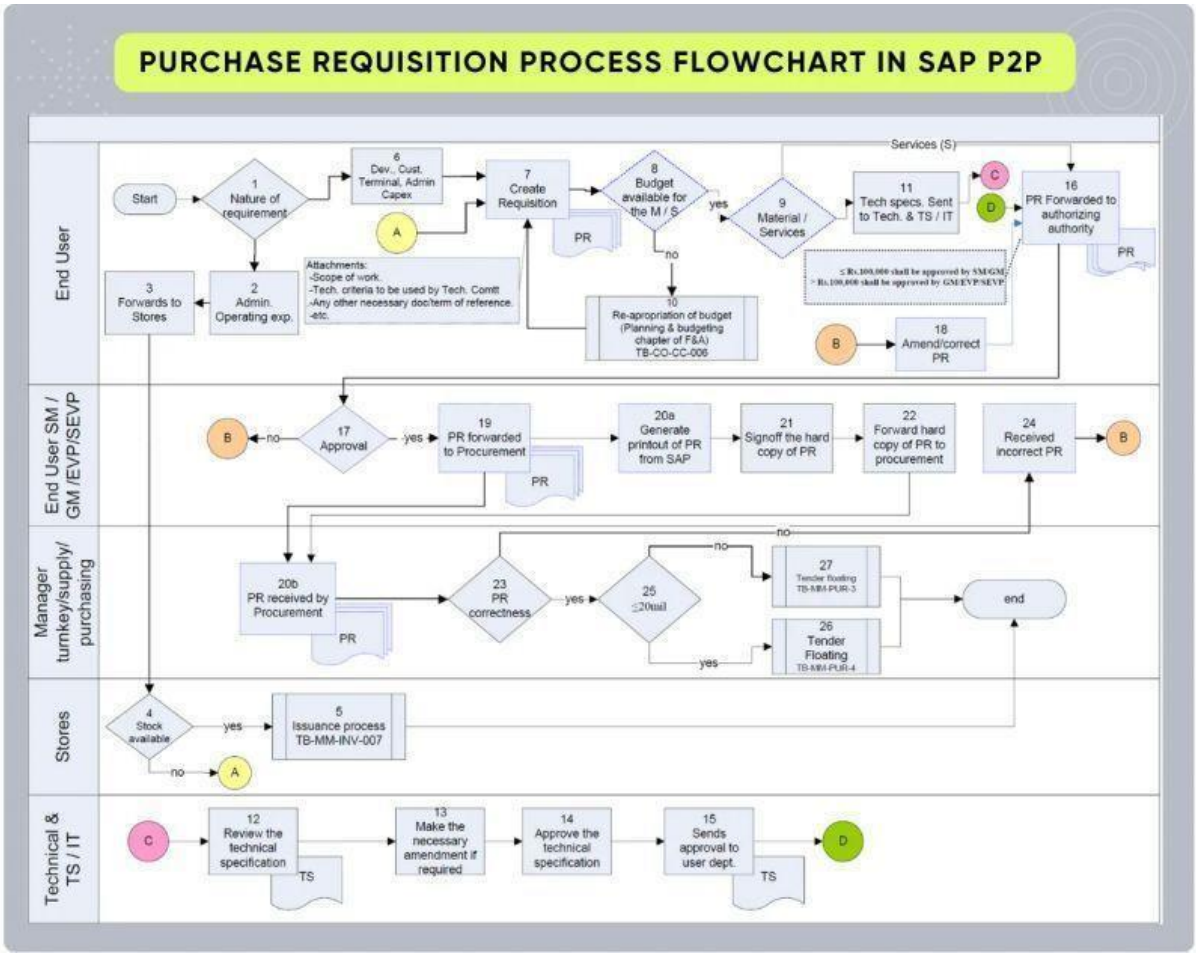

Figure 3: Purchase Requisition Flowchart

## 10. Tech Stack

SAP ERP, SAP MM, Simulation Tools

## 11. Unique Features

- End-to-end simulation
- Realistic scenario
- Clear workflow mapping

## 12. Future Improvements

- SAP S/4HANA implementation
- Integration with FI
- Automation with Fiori

## 13. Conclusion

This project demonstrates how SAP MM streamlines procurement and ensures efficiency. This project also provides a strong conceptual understanding of ERP systems and prepares for real-world SAP implementation.
